

PROJECT OCEANOLOGY

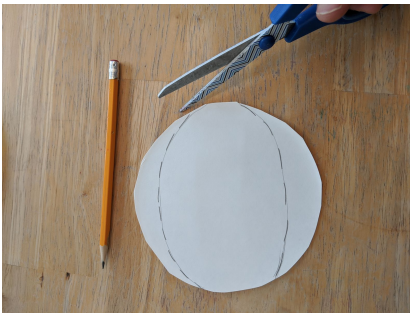

Creature Feature: Flounder STEAM Connection

Flounders are great at camouflaging on the seafloor. They can change their colors to match the sand or mud they are resting on. Make your own flounder using a few materials from around your house. You'll need: a paper plate, scissors, pencil, tape and crayons. You can even color your flounder to camouflage in your house or yard! See if a family member can find it!

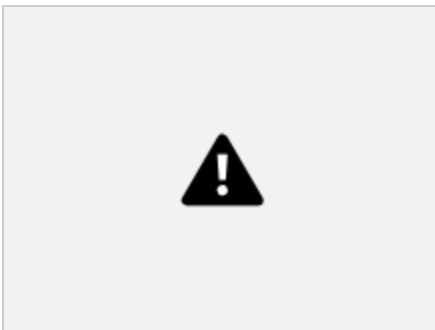

1. Cut out the circle in the middle of the paper plate.

2. Use a pencil to draw an oval shape and then cut it out.

- 3.
