

PROJECT OCEANOLOGY

Facebook Live: Rocky Intertidal

The rocky intertidal zone is a habitat that is always changing. At high tide much of the area is underwater and at low tide much of the area is exposed to air.

1.	What are 3 challenges faced by organisms that live in this habitat?
2.	Draw an organism that lives in the rocky intertidal zone. Label any body parts or structures that help it survive one of the challenges you listed above.

3. What behaviors or actions help this organism survive in this habitat?
